

# [Colorado Incentives for Commercial EV Purchases](#)

September 6, 2019

## **Get the Scoop on the New Colorado Incentives for Commercial EV Purchases**

We're excited to tell you that our home state of Colorado has two great incentive programs for replacing old diesel or gasoline vans, trucks and buses with new zero-emission vehicles, such as the ones you can get from Lightning Systems. Available for GVWR classes 4-8, these grants can provide up to 110% of the cost of the electric drivetrain upfit, and are available for government, private and non-profit fleets.

[Alt Fuels Colorado](#), administered by the [Regional Air Quality Council](#), is focused on cargo vehicles, and has three short application windows in each year. The next one is coming right up, so hurry!

[Colorado Department of Transportation](#) (CDOT) has a very similar program targeted at shuttles and buses. Applications are accepted annually, during a six-week window in the fall. Again - don't delay: apply today!

Lightning Systems is working closely with both organizations and has in-house expertise regarding these programs. Take a look at our [Colorado Programs Information Sheet](#), and contact [Charlie Beckman](#) today to find out how you can electrify your fleet with grants from the state.
